By Gary Simpson

Would you spend seven bucks to learn how to become wealthy? What a dumb question. Maybe I should have asked: "would you INVEST seven bucks to learn how to become wealthy?"

Did you know that there are now a lot of very valuable e-books available for just \$7 or \$9? It is a new trend. Marketers have realized that they can operate on bigger volumes by dropping the price down to the cost of just a fast food meal or a packet of cigarettes or a bottle of cheap wine. And so, the \$7 deals are happening.

I have bought several \$7 and \$9 e-books of late and I have been very pleasantly surprised both by the content and quality of information. I have even been inspired to write a couple of testimonials for these books. Furthermore, I have even mentioned them on various forums and praised their authors.

When you are able to get some information from a book or an e-book or a seminar that is able to enhance your lifestyle or your ability to make more money then that has to be a great deal - especially if it only costs you less than ten bucks! What is ten bucks? What can you purchase that is better value? None of those things that I listed above have the capacity to do anything good for you. In fact, all they will do is cause you trouble in the long run.

An investment in your brain is worth infinitely more than spending money on your stomach or your addiction. See things for what they are really worth and it will open up a whole new range of possibilities for you.
